# Thinking Differently in Haemophilia: the Past, the Present and the Future of Gene Therapy

EAHAD 2020 Satellite Symposium

## Agenda

- 13:45 **Welcome and Introduction**  
Chair: Frank Leebeek  
Erasmus University Medical Centre, Rotterdam, the Netherlands
- 13:55 **Looking at Gene Therapy in Haemophilia**  
Hervé Chambost  
University Hospital La Timone, Marseille, France
- 14:20 **Optimising Patient Support Through Gene Therapy**  
Keith Gomez & Elsa Aradom  
Royal Free Hospital, London, United Kingdom
- 14:45 **Q&A Session**  
All Faculty
- 14:55 **Summary and Close**  
Frank Leebeek  
Erasmus University Medical Centre, Rotterdam, the Netherlands

As we approach 50 years from the first investigation of gene therapy as a therapeutic possibility, it is important to reflect on both our history, our present and our future across disease areas. Learning from our past and looking through the history of gene therapy, it is essential to highlight what we have learnt from previous gene therapies and how this has influenced new therapies today in disease areas such as haemophilia. This symposium offers an opportunity to review the history of gene therapy and discuss how its introduction has influenced the patient treatment journey.

This symposium has been initiated and sponsored by BioMarin
